FUNDAMENTAL PRINCIPLES OF LAW AND ECONOMICS

Routledge This textbook places the relationship between law and economics in its international context, explaining the fundamentals of this increasingly important area of teaching and research in an accessible and straightforward manner. In presenting the subject, Alan Devlin draws on the neoclassical tradition of economic analysis of law while also showcasing cutting-edge developments, such as the rise of behavioural economic theories of law. Key features of this innovative book include: case law, directives, regulations, and statistics from EU, UK, and US jurisdictions are presented clearly and contextualised for law students, showing how law and economics theory can be understood in practice; succinct end-of-chapter summaries highlight the essential points in each chapter to focus student learning; further reading is provided at the end of each chapter to guide independent research. Making use of tables and diagrams throughout to facilitate understanding, this text provides a comprehensive overview of law-and-economics that is ideal for those new to the subject and for use as a course text for law-and-economics modules.

SECURITY AND PRIVACY IN THE INTERNET OF THINGS: CHALLENGES AND SOLUTIONS

IOS Press The Internet of Things (IoT) can be defined as any network of things capable of generating, storing and exchanging data, and in some cases acting on it. This new form of seamless connectivity has many applications: smart cities, smart grids for energy management, intelligent transport, environmental monitoring, healthcare systems, etc. and EU policymakers were quick to realize that machine-to-machine communication and the IoT were going to be vital to economic development. It was also clear that the security of such systems would be of paramount importance and, following the European Commission's Cybersecurity Strategy of the European Union in 2013, the EU's Horizon 2020 programme was set up to explore available options and possible approaches to addressing the security and privacy issues of the IoT. This book presents 10 papers which have emerged from the research of the Horizon 2020 and CHIST-ERA programmes, and which address a wide cross-section of projects ranging from the secure management of personal data and the specific challenges of the IoT with respect to the GDPR, through access control within a highly dynamic IoT environment and increasing trust with distributed ledger technologies, to new cryptographic approaches as a counter-measure for side-channel attacks and the vulnerabilities of IoT-based ambient assisted living systems. The security and safety of the Internet of Things will remain high on the agenda of policymakers for the foreseeable future, and this book provides an overview for all those with an interest in the field.

DEVELOPMENT OF ECONOMIC ANALYSIS 7TH EDITION

Routledge Now in its seventh edition, Ingrid Rima's classic textbook charts the development of the discipline from the classical age of Plato and Aristotle, through the middle ages to the first flowering of economics as a distinct discipline - the age of Petty, Quesnay and Smith - to the era of classical economics and the marginalist revolution. The book then goes on to offer extensive coverage of the twentieth century - the rise of Keynesianism, econometrics, the Chicago School and the neoclassical paradigm. The concluding chapters analyze the birth of late twentieth century developments such as game theory, experimental economics and competing schools of economic thought. This text includes a number of practical features: a "family tree" at the beginning of each section, illustrating how the different developments within economics are interlinked the inclusion of readings from the original key texts a summary and questions to discuss, along with glossaries and suggestions for further reading This book provides the clearest, most readable guide to economic thought that exists and encourages students to examine the relevance of the discipline's history to contemporary theory.

EMERGING SOLUTIONS FOR FUTURE MANUFACTURING SYSTEMS

IFIP TC 5 / WG 5.5. SIXTH IFIP INTERNATIONAL CONFERENCE ON INFORMATION TECHNOLOGY FOR BALANCED AUTOMATION SYSTEMS IN MANUFACTURING AND SERVICES, 27-29 SEPTEMBER 2004, VIENNA, AUSTRIA

Springer Industries and particularly the manufacturing sector have been facing difficult challenges in a context of socio-economic turbulence characterized by complexity as well as the speed of change in causal interconnections in the socio-economic environment. In order to respond to these challenges companies are forced to seek new technological and organizational solutions. In this context two main characteristics emerge as key properties of a modern automation system - agility and distribution. Agility because systems need not only to be flexible in order to adjust to a number of a-priori defined scenarios, but rather must cope with unpredictability. Distribution in the sense that automation and business processes are becoming distributed and supported by collaborative networks. Emerging Solutions for Future Manufacturing Systems includes the papers selected for the BASYS'04 conference, which was held in Vienna, Austria in September 2004 and sponsored by the International Federation for Information Processing (IFIP).
