On Pluto: Inside the Mind of Alzheimer's

Good Night Books This is a book about living with Alzheimer's, not dying with it. It is a book about hope, faith, and humor—a prescription far more powerful than the conventional medication available today to fight this disease. Alzheimer's is the sixth leading cause of death in the US—and the only one of these diseases on the rise. More than 5 million Americans have been diagnosed with Alzheimer's or a related dementia; about 35 million people worldwide. Greg O'Brien, an award-winning investigative reporter, has been diagnosed with early-onset Alzheimer's and is one of those faceless numbers. Acting on long-term memory and skill coupled with well-developed journalistic grit, O'Brien decided to tackle the disease and his imminent decline by writing frankly about the journey. O'Brien is a master storyteller. His story is naked, wrenching, and soul searching for a generation and their loved ones about to cross the threshold of this death in slow motion. On Pluto: Inside the Mind of Alzheimer's is a trail-blazing roadmap for a generation—both a “how to” for fighting a disease, and a “how not” to give up! From the Trade Paperback edition.

The Complete Plays

Penguin UK Marlowe's seven plays dramatise the fatal lure of potent forces, whether religious, occult or erotic. In the victories of Tamburlaine, Faustus's encounters with the demonic, the irreverence of Barabas in **THE JEW OF MALTA**, and the humiliation of Edward II in his fall from power and influence, Marlowe explores the shifting balance between power and helplessness, the sacred and its desecration.

Designing and Evaluating Usable Technology in Industrial Research

Three Case Studies

Morgan & Claypool Publishers This book is about HCI research in an industrial research setting. It is based on the experiences of two researchers at the IBM T. J. Watson Research Center. Over the last two decades, Drs. John and Clare-Marie Karat have conducted HCI research to create innovative usable technology for users across a variety of domains. We begin the book by introducing the reader to the context of industrial research as well as a set of common themes or guidelines to consider in conducting HCI research in practice. Then case study examples of HCI approaches to the design and evaluation of usable solutions for people are presented and discussed in three domain areas: - item Conversational speech technologies, - item Personalization in eCommerce, and - item Security and privacy policy management technologies In each of the case studies, the authors illustrate and discuss examples of HCI approaches to design and evaluation that worked well and those that did not. They discuss what was learned over time about different HCI methods in practice, and changes that were made to the HCI tools used over time. The Karats discuss trade-offs and issues related to time, resources, and money and the value derived from different HCI methods in practice. These decisions are ones that need to be made regularly in the industrial sector. Similarities and differences with the types of decisions made in this regard in academia will be discussed. The authors then use the context of the three case studies in the three research domains to draw insights and conclusions about the themes that were introduced in the beginning of the book. The Karats conclude with their perspective about the future of HCI industrial research. Table of Contents: Introduction: Themes and Structure of the Book / Case Study 1: Conversational Speech Technologies: Automatic Speech Recognition (ASR) / Case Study 2: Personalization in eCommerce / Case Study 3: Security and Privacy Policy Management Technologies / Insights and Conclusions / The Future of Industrial HCI

Environmental and Technology Policy in Europe

Technological Innovation and Policy Integration

Springer Science & Business Media This book contains six studies on various national environmental policies and environment-oriented technology policy systems in Austria, Denmark, Germany, the Netherlands, Spain, and the United Kingdom, sandwiched between this introductory and a concluding chapter. These studies were conducted as part of the ENVINNO research project, "Towards an Integration of Environmental and Ecology-Oriented Technology Policy: Stimulus and Response in Environment Related Innovation Networks", which formed part of the Targeted Social and Economic Research (TSER) Programme of Directorate-General XII of the European Commission, now 1 Directorate-General for Research. We like to thank Mrs. Genevieve Zdrojewski of GD Directorate-General Research for her kind support of our research project. The project was carried out between 1998 and 2001 by research teams from the six countries. The co-ordinating institute was the Department of Environmental Economics and Management at the Vienna University of 2 Economics and Business Administration. At this place we want to mention all researchers involved in the ENVINNO project and we want to thank them all for their contributions to this book and the project and for the good time we have had performing the project and meeting each other at regular intervals in Vienna (A), Enschede (NL), Berlin (D), and Sevilla (E). Concepts from Tensor Analysis and Differential Geometry

Elsevier Concepts from Tensor Analysis and Differential Geometry discusses coordinate manifolds, scalars, vectors, and tensors. The book explains some interesting formal properties of a skew-symmetric tensor and the curl of a vector in a coordinate manifold of three dimensions. It also explains Riemann spaces, affinely connected spaces, normal coordinates, and the general theory of extension. The book explores differential invariants, transformation groups, Euclidean metric space, and the Frenet formulae. The text describes curves in space, surfaces in space, mixed surfaces, space tensors, including the formulae of Gauss and Weingarten. It presents the equations of two scalars K and U which can be defined over a regular surface S in a three dimensional Riemannian space R . In the equation, the scalar K , which is an intrinsic differential invariant of the surface S , is known as the total or Gaussian curvature and the scalar U is the mean curvature of the surface. The book also tackles families of parallel surfaces, developable surfaces, asymptotic lines, and orthogonal envelopes. The text is intended for a one-semester course for graduate students of pure mathematics, of applied mathematics covering subjects such as the theory of relativity, fluid mechanics, elasticity, and plasticity theory.

Complexity Demystified

A Guide for Practitioners

Triarchy Press Limited Practitioners often say: 'We need to do something differently but are not sure what to do or how to do it' and 'Scientists explain complexity but don't tell you what to do in practical terms'. This book has been written to offer solutions for these practitioners - to provide an Approach for 'putting complexity to work'. Practice is, de facto, determined by changing contexts. In a specific instance, what needs doing will depend on the circumstances, and cannot be bounded or decided in advance. But when most auditors, donors or managers demand tangible, target-driven results within a fixed time frame, how can practitioners convince them that working with the open principles of complexity will lead to more successful and sustainable solutions? This book is not 'yet another' complexity book. What it offers is an in-depth, systematic, Framework that practitioners can use to focus on the dynamic phenomena already active in their working context, to be able to shape and influence these phenomena 'on the fly'. The authors present six case studies, including the UK Fuel Crisis (2000) and the 2010 Gulf of Mexico Oil Spill. Their Approach reveals a clear understanding of the stresses and strains that were felt throughout the crises and how these might have been handled differently had an appreciation of the underlying complexity been part of standard practice. Drawn from their own experiences and those of other practitioners, and to bridge the gap between theory, experience and practice, the authors have produced a clear and erudite 'bible' for realising the inherent benefits of 'putting complexity to work'.

Comparative Osteology

A Laboratory and Field Guide of Common North American Animals

Academic Press In the forensic context it is quite common for nonhuman bones to be confused with human remains and end up in the medical examiner or coroner system. It is also quite common for skeletal remains (both human and nonhuman) to be discovered in archaeological contexts. While the difference between human and nonhuman bones is often very striking, it can also be quite subtle. Fragmentation only compounds the problem. The ability to differentiate between human and nonhuman bones is dependent on the training of the analyst and the available reference and/or comparative material. **Comparative Osteology** is a photographic atlas of common North American animal bones designed for use as a laboratory and field guide by the forensic scientist or archaeologist. The intent of the guide is not to be inclusive of all animals, but rather to present some of the most common species which also have the highest likelihood of being potentially confused with human remains. An affordably priced, compact laboratory/field manual, comparing human and nonhuman bones Contains almost 600 high-quality black and white images and diagrams, including inch and centimeter scales with each photograph Written by the foremost forensic scientists with decades of experience in the laboratory and as expert witnesses An additional Companion Web site hosts images from the volume the reader can magnify and zoom into to see specific landmarks and features on bones

Ceramic Integration and Joining Technologies

From Macro to Nanoscale

John Wiley & Sons This book joins and integrates ceramics and ceramic-based materials in various sectors of technology. A major imperative is to extract scientific information on joining and integration response of real, as well as model, material systems currently in a developmental stage. This book envisions integration in its broadest sense as a fundamental enabling technology at multiple length scales that span the macro, millimeter, micrometer and nanometer ranges. Consequently, the book addresses integration issues in such diverse areas as space power and propulsion, thermoelectric power generation, solar energy, micro-electro-mechanical systems (MEMS), solid oxide fuel cells (SOFC), multi-chip modules, prosthetic devices, and implanted biosensors and stimulators. The engineering challenge of designing and manufacturing complex structural, functional, and smart components and devices for the above applications from smaller, geometrically simpler units requires innovative development of new integration technology and skillful adaptation of existing technology.

Emergency First Responder Respirator Thermal Characteristics

Workshop Proceedings

Createspace Independent Publishing Platform The purpose of this workshop was to identify performance needs and establish research priorities to address the thermal characteristics of respiratory equipment used by emergency first responders. The workshop provided a forum for representatives from the first responder community, self contained breathing apparatus (SCBA) and component manufacturers, and research and testing experts to discuss issues, technologies, and research associated with SCBA high temperature performance. The goals of the workshop were defined in two parts: 1) Clarify baseline information, including the current state-of-the-art, applicable fire service events, and current related research, and 2) Research planning, including identification of performance needs and short and long term research priorities. Presentations were given to explain the current SCBA and certification process, understand experience from actual fire service incidents, and review the current state of respirator research. After the presentations, the workshop divided into three working group sessions to discuss performance needs and research priorities in smaller groups. Suggested topics for discussion included: a) Current Equipment, b) Current Practice and Usage, c) Future Trends, d) Short Term Research Needs, e) Long Term Research Needs, and f) other issues. The results of the three smaller groups' deliberations were discussed when the full workshop reconvened. The responses from each group were merged into a combination of issues that related to the use and performance of the lens of the SCBA. The primary concerns and research priorities were the characterization of the fire fighter environment, performance of current and new technology, development of representative and realistic testing, and improvements to fire fighter training on the limitations of protective equipment. A significant amount of discussion concentrated on the testing for NFPA certification, which currently contains limited thermal testing.
