Photogrammetric Applications for Cultural Heritage

Guidance for Good Practice

This guidance covers the practical application of photogrammetry in recording cultural heritage, with particular reference to structure from motion (SfM) techniques. Our audience for this document includes survey contractors, archaeological contractors, voluntary organisations and specialists. Photogrammetric image acquisition and processing, until recently requiring a considerable investment in hardware and software, are now possible at a fraction of their former cost. This has led to a huge increase in the use of photogrammetry in cultural heritage recording. The skills required to apply the techniques successfully and accurately are discussed, and background information on how various parts of the process work is provided so that better results can be achieved through better understanding. Photogrammetry is characterised by its versatility, and is applicable over a wide range of scales, from landscapes to small objects. The particular requirements needed at these different scales are outlined, and both imaging techniques and useful ancillary equipment are described. The different types of outputs are discussed, including their suitability for further interrogation using a range of established analytical techniques and the presentation options available. A range of case studies illustrates the application of photogrammetry across a variety of projects that broadly reflect the areas discussed in the text. This document is one of a number of Historic England technical advice documents on how to survey historic places.

Light It, Shoot It, Retouch It

Learn Step by Step How to Go from Empty Studio to Finished Image

New Riders FOR THE FIRST TIME EVER, YOU'LL LEARN ALL THREE ASPECTS OF WHAT IT TAKES TO CREATE STUNNING PORTRAITS (HINT: IT'S NOT JUST THE LIGHTING) Scott Kelby, the world's #1 best-selling author of photography books, Editor-in-Chief and Publisher of *Photoshop User* magazine, and Publisher of the just-released *Light It* magazine, has reinvented how lighting books are written by finally revealing the entire process from start to finish. You see everything from the complete lighting setup (and all the gear used), to the shoot (including all the camera settings and a contact sheet of the progression of the shoot), to the all-important part that most books don't dare include—the post-processing and retouching in Photoshop. This book also breaks new ground in the visual way it teaches you the lighting setup. There aren't any sketches or 3D models—you see the lighting layout in a full-page photo, taken from above during the live shoot, so you can see exactly where everything's positioned (the subject, the photographer, the lighting, the background—you name it—you see it all). Plus, you'll see side, over-the-shoulder, and more behind-the-scenes views, so you can absolutely nail the lighting every time. LEARN THE LIGHTING SETUPS THE PROS USE Each year, Scott trains thousands of professional photographers during his *Light It. Shoot It. Retouch It. LIVE!* seminar tour and now, for the first time ever, he's taken that incredibly popular style of learning and put it into book form. Now everyone can have a real-world reference for getting the same looks today's clients are clamoring for. You'll learn: The step-by-step layouts for creating the most-requested and sought-after lighting looks How to get more out of one light than you ever thought you could (this is worth it alone!) How to control and shape your light without breaking the bank The camera settings, gear, and power settings for every shot The retouching techniques the pros really use to make their subjects look their very best How to retouch hair, eyes, lips, skin, and lots of other little retouching tricks that make a really big difference How to create high-contrast portrait effects without buying expensive plug-ins A host of insider tricks, invaluable shortcuts, and kick-butt special effects to give you a real advantage over the competition Plus, Scott includes a special bonus chapter that shows how to create these same studio looks using off-camera hot shoe flashes and the modifiers made for them. There's never been a book like it.

Sketching Light

An Illustrated Tour of the Possibilities of Flash

New Riders Following up on the great success of *The Moment It Clicks* and *The Hot Shoe Diaries: Big Light from Small Flashes*, legendary magazine photographer Joe McNally takes us on another memorable ride with *Sketching Light*, another trip into the land of light—but this time running the gamut from small flash to big flash, and everywhere in between. Of course, Joe includes coverage of Nikon Speedlights, but he also covers big flash, as well as "in-between" lights as the Elinchrom Quadra. The exploration of new technology, as well as the explanation of older technology. No matter what equipment Joe uses and discusses, the most important element of Joe's instruction is that it is straightforward, complete, and honest. No secrets are held back, and the principles he talks about apply generally to the shaping and quality of light, not just to an individual model or brand of flash. He tells readers what works and what doesn't via his let's-see-what-happens approach, he shows how he sets up his shots with plentiful sketches and behind-the-scenes production shots, and he does it all with the intelligence, clarity, and wisdom that can only come from shooting in the field for 30 years for the likes of *National Geographic*, *Time*, *Life*, and *Sports Illustrated*—not to mention the wit and humor of a clearly warped (if gifted) mind.

A Practical Guide to Sentiment Analysis

[Springer](#) Sentiment analysis research has been started long back and recently it is one of the demanding research topics. Research activities on Sentiment Analysis in natural language texts and other media are gaining ground with full swing. But, till date, no concise set of factors has been yet defined that really affects how writers' sentiment i.e., broadly human sentiment is expressed, perceived, recognized, processed, and interpreted in natural languages. The existing reported solutions or the available systems are still far from perfect or fail to meet the satisfaction level of the end users. The reasons may be that there are dozens of conceptual rules that govern sentiment and even there are possibly unlimited clues that can convey these concepts from realization to practical implementation. Therefore, the main aim of this book is to provide a feasible research platform to our ambitious researchers towards developing the practical solutions that will be indeed beneficial for our society, business and future researches as well.

(Re)Constructing Memory: School Textbooks and the Imagination of the Nation

[Springer](#) This book examines the shifting portrayal of the nation in school textbooks in 14 countries during periods of rapid political, social, and economic change. Drawing on a range of analytic strategies, the authors examine history and civics textbooks, and the teaching of such texts, along with other prominent curricular materials—children's readers, a required text penned by the head of state, a holocaust curriculum, etc.. The authors analyze the uses of history and pedagogy in building, reinforcing and/or redefining the nation and state especially in the light of challenges to its legitimacy. The primary focus is on countries in developing or transitional contexts. Issues include the teaching of democratic civics in a multiethnic state with little history of democratic governance; shifts in teaching about the Khmer Rouge in post-conflict Cambodia; children's readers used to define national space in former republics of the Soviet Union; the development of Holocaust education in a context where citizens were both victims and perpetrators of violence; the creation of a national past in Turkmenistan; and so forth. The case studies are supplemented by commentary, an introduction and conclusion.
