Divided into three parts, it first examines the concept of Life from physics to biology. It then presents insights on the concept from the perspectives of philosophy, theology, and ethics. The book concludes with chapters on the hermeneutics of Life, and pays special attention to the Biosemiotics approach to the concept. The question ‘What is Life?’ has been deliberated by the greatest minds throughout human history. Life as we know it is not a substance or fundamental property, but a complex process. It is not an easy task to develop an unequivocal approach towards Life combining scientific, semiotic, philosophical, theological, and ethical perspectives. In its combination of these perspectives, and its wide-ranging scope, this book opens up levels and identifies issues which can serve as intersections for meaningful interdisciplinary discussions of Life in its different aspects. The book includes the four plenary lectures and selected, revised and extended papers from workshops of the 14th European Conference on Science and Theology (ECST XIV) held in Tartu,

**Estonia, April 2012. Karl Pearson The Scientific Life in a Statistical Age** [Princeton University Press](#) **Karl Pearson, founder of modern statistics, came to this field by way of passionate early studies of philosophy and cultural history as well as ether physics and graphical geometry. His faith in science grew out of a deeply moral quest, reflected also in his socialism and his efforts to find a new basis for relations between men and women. This biography recounts Pearson's extraordinary intellectual adventure and sheds new light on the inner life of science. Theodore Porter's intensely personal portrait of Pearson extends from religious crisis and sexual tensions to metaphysical and even mathematical anxieties. Pearson sought to reconcile reason with enthusiasm and to achieve the impersonal perspective of science without sacrificing complex individuality. Even as he longed to experience nature directly and intimately, he identified science with renunciation and positivistic detachment. Porter finds a turning point in Pearson's career, where his humanistic interests gave way to statistical ones, in his Grammar of Science (1892), in which he attempted to establish scientific method as the moral educational basis for a refashioned culture. In this original and engaging book, a leading historian of modern science investigates the interior experience of one man's scientific life while placing it in a rich tapestry of social, political, and intellectual movements. Opening with a linking of Richard Dawkin's theory of the extended phenotype and Deleuzian thought, Ansell Pearson introduces the idea of germinal life to challenge traditional notions of ethology and philosophy. By revisiting nineteenth century Darwinism and the origins of germ science, Keith Ansell Pearson develops a stunning reading of Deleuze's key texts. He also introduces highly original interpretations of classic modern literature, including Thomas Hardy's Tess and D.H.Lawrence's Kangaroo before connecting these themes with cyborgism and the work of the performance artist Stelarc. As a companion to Ansell Pearson's Viroid Life, which explored Nietzsche's philosophy of the human, Germinal Life provides a highly original study of the biophilosophical aspects of Deleuze's thought. Focusing on the period from the Renaissance to the early twenty-first century, the articles cover all disciplines (Biology, Alchemy, Behaviorism), historical periods (the Scientific Revolution, World War II, the Cold War), concepts (Hypothesis, Space and Time, Ether), and methodologies and philosophies (Observation and Experiment, Darwinism). Coverage is international, tracing the spread of science from its traditional centers and explaining how the prevailing knowledge of non-Western societies has modified or contributed to the dominant global science as it is currently understood. Revealing the interplay between science and the wider culture, the Companion includes entries on topics such as minority groups, art, religion, and science's practical applications. One hundred biographies of the most iconic historic figures, chosen for their contributions to science and the interest of their lives, are also included. Above all The Oxford Companion to the History of Modern Science is a companion to world history: modern in coverage, generous in breadth, and cosmopolitan in scope. The volume's utility is enhanced by a thematic outline of the entire contents, a thorough system of cross-referencing, and a detailed index that enables the reader to follow a specific line of inquiry along various threads from multiple starting points. Each essay has numerous suggestions for further reading, all of which favor literature that is accessible to the general reader, and a bibliographical essay provides a general overview of the scholarship in the field. Lastly, as a contribution to the visual appeal of the Companion, over 100 black-and-white illustrations and an eight-page color section capture the eye and spark the imagination. **Interactive Science grade-level bundles.** The Pearson at Home Interactive Science Activities workbooks provide children with a student-centered approach to scientific discovery. Each hands-on activity presents a child with a challenging question that can be investigated and explored independently or with parent guidance. As part of the directed inquiry process, the child will answer this question by exploring the resources, following the outlined procedures of each activity, collecting data, and drawing conclusions. In some instances, parents might need to help children with certain parts of the activity. Following the directed inquiry, the child will be given an opportunity to expand and demonstrate scientific reasoning by modifying the investigation and designing his or her own experiments to illustrate the concept. Utilizing these activities will encourage every child to think like a scientist and encourage him or her to be inquisitive. This curriculum has been modified specifically for homeschool families. At times, there may be references to print or digital components that are not included within the homeschool bundle. This will not hinder your child's successful completion of the course. **Pm Science P5/6 Wb (fdn) Systems** [Pearson Education South Asia](#) **The perfect match science series is written based on the latest primary science syllabus issued by the Ministry of Education, Singapore.
