Reasons to Vaccinate

Proof That Vaccines Save Lives

My research started over a decade ago. I was expecting my first child and like most first-time parents, I was looking up all the things that came with pregnancy, birth, and caring for a newborn. It took a very long time to research this book, I've been observing the CDC, FDA, & pharmaceutical industry for over a decade. In that time, I, along with the rest of the United States continued to see a rise in allergies, autism, SIDS, cancer in children, 54% of the children suffering some form of chronic illness - the overall health of this first world nation has taken a nose dive and we are consistently told that the rise in all of the above has no link to the rise in vaccinations given. The CDC & the World Health Organization still claim that vaccines are safe and effective. I cannot wait to share all I've uncovered with you. NOTE: Satirical work.

State of the World's Vaccines and Immunization

World Health Organization This latest edition of *State of the World's Vaccines and Immunization* highlights the immense progress made in global immunization since the mid-1990s. These achievements include the near-eradication of polio worldwide as well as dramatic reductions in the incidence of measles and maternal and neonatal tetanus in some of the lowest-income countries. This report also charts progress in the development and introduction of new life-saving vaccines that have the potential to save millions of lives each year. However, the report also points out that many children have yet to benefit from these achievements. In Sub-Saharan Africa, for example, only about 50% of children are immunized during their first year of life. The report highlights obstacles to equitable world-wide access to effective and safe immunization and how these can be overcome.

Adverse Effects of Vaccines

Evidence and Causality

National Academies Press In 1900, for every 1,000 babies born in the United States, 100 would die before their first birthday, often due to infectious diseases. Today, vaccines exist for many viral and bacterial diseases. The National Childhood Vaccine Injury Act, passed in 1986, was intended to bolster vaccine research and development through the federal coordination of vaccine initiatives and to provide relief to vaccine manufacturers facing financial burdens. The legislation also intended to address concerns about the safety of vaccines by instituting a compensation program, setting up a passive surveillance system for vaccine adverse events, and by providing information to consumers. A key component of the legislation required the U.S. Department of Health and Human Services to collaborate with the Institute of Medicine to assess concerns about the safety of vaccines and potential adverse events, especially in children. *Adverse Effects of Vaccines* reviews the epidemiological, clinical, and biological evidence regarding adverse health events associated with specific vaccines covered by the National Vaccine Injury Compensation Program (VICP), including the varicella zoster vaccine, influenza vaccines, the hepatitis B vaccine, and the human papillomavirus vaccine, among others. For each possible adverse event, the report reviews peer-reviewed primary studies, summarizes their findings, and evaluates the epidemiological, clinical, and biological evidence. It finds that while no vaccine is 100 percent safe, very few adverse events are

shown to be caused by vaccines. In addition, the evidence shows that vaccines do not cause several conditions. For example, the MMR vaccine is not associated with autism or childhood diabetes. Also, the DTaP vaccine is not associated with diabetes and the influenza vaccine given as a shot does not exacerbate asthma. Adverse Effects of Vaccines will be of special interest to the National Vaccine Program Office, the VICP, the Centers for Disease Control and Prevention, vaccine safety researchers and manufacturers, parents, caregivers, and health professionals in the private and public sectors.

Vaccines, Autism and Childhood Disorders

Crucial Data That Could Save Your

Child's Life

"Autism is a complex disability resulting in brain damage, immune dysfunction, self-destructive behavior patterns, and unresponsiveness to other people. Recently, autism rates (and other childhood disorders) have skyrocketed. These increases closely parallel the growing number of mandatory vaccines. In some regions, 1 of every 150 children is now autistic. We have a national and potentially worldwide epidemic on our hands. Autism often strikes following an early childhood of apparently normal development. Many parents believe that childhood vaccines, especially MMR (measles, mumps and rubella), are responsible. Some studies confirm that vaccines may cause autism in certain predisposed children. However, health authorities deny that autism is linked to vaccines. Some studies support their position. Congress recently held several hearings to investigate the causes of, and cures for, this growing epidemic. The testimony hints at a medical coverup. This book chronicles Congressional efforts to expose the truth, summarizes vaccine studies on both sides of the debate, and provides parents with crucial data to make informed decisions."

Maternal Immunization

Academic Press Immunization during pregnancy with currently recommended vaccines prevents infection in the mother, the unborn fetus, and the young infant, and there is an increasing focus from different stakeholders to use this approach for other infections of importance to protect these vulnerable groups. The aim of this Maternal Immunization book is to provide a contemporary overview of vaccines used in pregnancy (and the lactation period), with emphasis on aspects of importance for the target groups, namely, rationale for the use of vaccines in pregnancy, safety, immunogenicity (immunology), timing to vaccinate, repeat doses, protective effects in the mother, fetus, and infant, and public acceptance and implementation, of existing and of future vaccines. Provides an overview of a quickly evolving topic. This will benefit the reader who wishes to rapidly become informed and up-to-date with new developments in this field Suitable to a broad audience: scientific researchers, obstetricians, gynecologists, neonatologists, vaccinators, pediatricians, students, and industry. Maternal vaccination impacts a wide range of specialists Allows health care professionals/researchers to gain insight into other aspects of vaccination in pregnancy outside of their specialism Is coauthored by specialists from multiple disciplines, providing a diverse view of the subject, increasing its interest and appeal Creates awareness of the current developments in this area of medicine and of the potential of maternal vaccination to improve the health of mothers and infants worldwide

National Strategy for the COVID-19 Response and Pandemic Preparedness

January 2021

Simon and Schuster The ultimate guide for anyone wondering how President Joe Biden will respond to the COVID-19 pandemic—all his plans, goals, and executive orders in response to the coronavirus crisis. Shortly after being inaugurated as the 46th President of the United States, Joe Biden and his administration released this 200 page guide detailing his plans to respond to the coronavirus pandemic. The National Strategy for the COVID-19 Response and Pandemic Preparedness breaks down seven crucial goals of President Joe Biden's administration with regards to the coronavirus pandemic: 1. Restore trust with the American people. 2. Mount a safe, effective, and comprehensive vaccination campaign. 3. Mitigate spread through expanding masking, testing, data, treatments, health care

workforce, and clear public health standards. 4. Immediately expand emergency relief and exercise the Defense Production Act. 5. Safely reopen schools, businesses, and travel while protecting workers. 6. Protect those most at risk and advance equity, including across racial, ethnic and rural/urban lines. 7. Vaccines and Autoimmunity

John Wiley & Sons In light of the discovery of Autoimmune Syndrome Induced by Adjuvants, or ASIA, *Vaccines and Autoimmunity* explores the role of adjuvants - specifically aluminum in different vaccines - and how they can induce diverse autoimmune clinical manifestations in genetically prone individuals. *Vaccines and Autoimmunity* is divided into three sections; the first contextualizes the role of adjuvants in the framework of autoimmunity, covering the mechanism of action of adjuvants, experimental models of adjuvant induced autoimmune diseases, infections as adjuvants, the Gulf War Syndrome, sick-building syndrome (SBS), safe vaccines, toll-like receptors, TLRS in vaccines, pesticides as adjuvants, oil as adjuvant, mercury, aluminum and autoimmunity. The following section reviews literature on vaccines that have induced autoimmune conditions such as MMR and HBV, among others. The final section covers diseases in which vaccines were known to be the solicitor - for instance, systemic lupus erythematosus - and whether it can be induced by vaccines for MMR, HBV, HCV, and others. Edited by leaders in the field, *Vaccines and Autoimmunity* is an invaluable resource for advanced students and researchers working in pathogenic and epidemiological studies.

Calling the Shots

Why Parents Reject Vaccines

NYU Press Winner, 2018 Donald W. Light Award for Applied Medical Sociology, American Sociological Association Medical Sociology Section Winner, 2018 Distinguished Scholarship Award presented by the Pacific Sociology Association Honorable Mention, 2017 ESS Mirra Komarovsky Book Award presented by the Eastern Sociological Society Outstanding Book Award for the Section on Altruism, Morality, and Social Solidarity presented by the American Sociological Association A rich, multi-faceted examination into the attitudes and beliefs of parents who choose not to immunize their children The measles outbreak at Disneyland in December 2014 spread to a half-dozen U.S. states and sickened 147 people. It is just one recent incident that the medical community blames on the nation's falling vaccination rates. Still, many parents continue to claim that the risks that vaccines pose to their children are far greater than their benefits. Given the research and the unanimity of opinion within the

medical community, many ask how such parents—who are most likely to be white, college educated, and with a family income over \$75,000—could hold such beliefs. For over a decade, Jennifer Reich has been studying the phenomenon of vaccine refusal from the perspectives of parents who distrust vaccines and the corporations that make them, as well as the health care providers and policy makers who see them as essential to ensuring community health. Reich reveals how parents who opt out of vaccinations see their decision: what they fear, what they hope to control, and what they believe is in their child's best interest. Based on interviews with parents who fully reject vaccines as well as those who believe in "slow vax," or altering the number of and time between vaccinations, the author provides a fascinating account of these parents' points of view. Placing these stories in dialogue with those of pediatricians who see the devastation that can be caused by vaccine-preventable diseases and the policy makers who aim to create healthy communities, *Calling the Shots* offers a unique opportunity to understand the points of disagreement on what is best for children, communities, and public health, and the ways in which we can bridge these differences.

A Shot to Save the World

The Remarkable Race and Ground-Breaking Science Behind the Covid-19 Vaccines

Penguin UK 'Thrilling, inspiring and informative page-turner.' Walter Isaacson, author of *The Code Breaker* You know what went wrong. This is the untold story of what went right. Few were ready when a mysterious respiratory illness emerged in Wuhan, China, in January 2020. Politicians, government officials, business leaders and public-health professionals were unprepared for the most devastating pandemic in a century. Many of the world's biggest drug and vaccine makers were slow to react or couldn't

muster an effective response. It was up to a small group of unlikely and untested scientists and executives to save civilization. A French businessman dismissed by many as a fabulist. A Turkish immigrant with little virus experience. A quirky Midwesterner obsessed with insect cells. A Boston scientist employing questionable techniques. A British scientist resented by his peers. Far from the limelight, each had spent years developing innovative vaccine approaches. Their work was met with scepticism and scorn. By 2020, these individuals had little proof of progress. Yet they and their colleagues wanted to be the ones to stop a virulent virus holding the world hostage. They scrambled to turn their life's work into life-saving vaccines in a matter of months, each gunning to make the big breakthrough - and to beat each other for the glory that a vaccine guaranteed. A number-one New York Times bestselling author and award-winning Wall Street Journal investigative journalist, Zuckerman takes us inside the top-secret laboratories, corporate clashes and high-stakes government negotiations that led to effective shots. Deeply reported and endlessly gripping, this is a dazzling, blow-by-blow chronicle of the most consequential scientific breakthrough of our time. It's a story of courage, genius and heroism. It's also a tale of heated rivalries, unbridled ambitions, crippling insecurities and unexpected drama. A Shot to Save the World is the story of how science saved the world. *LONGLISTED FOR THE FT MCKINSEY BUSINESS BOOK OF THE YEAR 2021*****

Human Health and Ecological Integrity

Ethics, Law and Human Rights

Routledge The connection between environment and health has been well studied and documented, particularly by the World Health Organization. It is now being included in some legal instruments, although for the most part caselaw does not explicitly make that connection. Neither the right to life nor the rights to health or to normal development are actually cited in the resolution of cases and in judges' decisions. This volume makes the connection explicit in a broad review of human rights and legal issues associated with public health and the environment. It will be particularly useful as many legal instruments emphasize the right to 'development' without fully discussing the necessary safety and public health aspects, and the respect for the ecology of any area where such 'development' (often unwanted by local or indigenous communities) is to be located. Climate change is another pressing variable that is considered, and several chapters address the interface between human health and ecological conditions. Overall the book integrates perspectives from a wide range of disciplines, including ethics, ecology, public health and epidemiology, and human rights and law.

Science and the Skeptic

Discerning Fact from Fiction

Twenty-First Century Books TM Fake news, pseudoscience, and quackery have become scourges, spreading through society from social media all the way to Congress. The line between entertainment and reality, between fact and fiction, has become blurred. Some of the most crucial issues of our time—climate change, vaccines, and genetically modified organisms—have become prime targets for nefarious disinformation campaigns. Far too many people have become distrustful of real science. Even those who still trust science no longer know what to believe or how to identify the truth. Not only does this result in the devaluation and distrust of real science, but it is also dangerous: people acting based on false information can hurt themselves or those around them. We must equip ourselves with the knowledge and skills to fight back against all this disinformation. In *Science and the Skeptic: Discerning Fact from Fiction*, you will learn how science is done, from the basic scientific method to the vetting process that scientific papers must go through to become published; how and why some people intentionally or unintentionally spread misinformation; and the dangers in believing and spreading false information. You'll also find twenty easy-to-follow rules for distinguishing fake science from the real deal. Armed with this book, empower yourself with knowledge, learning what information to trust and what to dismiss as deceit. "We're not just fighting an epidemic; we're fighting an infodemic. . . . This is a time for facts, not fear. This is a time for rationality, not rumors. This is a time for solidarity, not stigma."—Tedros Adhanom Ghebreyesus, director-general of the WHO "Our deepest beliefs should help navigate reality, not determine it."—Michael Gersen, *The Washington Post* "Journalism is very much about trying to simplify and distribute information about what's new and where advances have been made. That's incompatible with the scientific process, which can take a long time to build a body of evidence."—Kelly McBride, Poynter Institute

Risk, Democratic Citizenship and Public Policy

Oxford University Press In recent years there has been growing concern about the effectiveness and legitimacy of public decision making about risk, sparked by a series of high profile issues that have made headline news. These ten essays analyse the public understanding of risk and the policy making process. BSE, vaccination, genetically modified crops and the regulation of chemicals are looked at as case studies. These essays will be of interest to general political scientists, sociologists and specialists in public policy, as well as those specifically working in the field of risk analysis.

Extinction

Dorrance Publishing Extinction By: Robert Byrum We must ask ourselves about what is happening in our world today and where is humanity headed. Extinction? Certainly not in a time frame that anyone living today could possibly imagine. But we can look to the long-ago past and the present as our window into the possible far-off future. What can we see through that window? The book paints a landscape of events occurring today that are disturbing. It tells how we have been treating our Mother Earth since we arrived on the scene and how she is responding. We have not been kind siblings.

Vaccination Ethics and Policy

An Introduction with Readings

MIT Press A comprehensive overview of important and contested issues in vaccination ethics and policy by experts from history, science, policy, law, and ethics. Vaccination has long been a familiar, highly effective form of medicine and a triumph of public health. Because vaccination is both an individual medical intervention and a central component of public health efforts, it raises a distinct set of legal and ethical issues—from debates over their risks and benefits to the use of government vaccination requirements—and makes vaccine policymaking uniquely challenging. This volume examines the full range of ethical and policy issues related to the development and use of vaccines in the United States and around the

world. Forty essays, articles, and reports by experts in the field look at all aspects of the vaccine life cycle. After an overview of vaccine history, they consider research and development, regulation and safety, vaccination promotion and requirements, pandemics and bioterrorism, and the frontier of vaccination. The texts cover such topics as vaccine safety controversies; the ethics of vaccine trials; vaccine injury compensation; vaccine refusal and the risks of vaccine-preventable diseases; equitable access to vaccines in emergencies; lessons from the eradication of smallpox; and possible future vaccines against cancer, malaria, and Ebola. The volume intentionally includes texts that take opposing viewpoints, offering readers a range of arguments. The book will be an essential reference for professionals, scholars, and students. UNnatural Selection

Dark Forces

Grosvenor House Publishing Imagine a world where life-extending and life-saving capabilities are withheld: drugs, vaccines, medical procedures, operations and any technology that extends or saves lives. Not because humanity hasn't advanced in these fields, no. Because the world's governments have decided we can no longer save or extend life. We must live as far as possible, as nature had intended, to save humanity from self-annihilation, driven by uncontrollable population growth. Edward (Ed), Thorncroft, has built a substantial and sophisticated organisation to fight these laws, passed by the United Nations under the LPAS (Life Preservation Assistance Suspension) program. Ed, in addition to his illegal life-saving organisation, has entered politics and set up a large lobby group. His relationship with Leonora has continued to blossom, at a time when his relationship with his best friend, Hans Pelletise, continues its downward spiral. With the formation of Ed's political party, he has forged many relationships with senior leaders and politicians worldwide. But his enemies continue to grow in number, and dark forces are now at work to thwart Ed's goal of watering down LPAS laws and his eventual aim of having the laws repealed. Many believe that should Ed succeed; it will bring about the end of humanity. For this reason, they intend to stop him and anyone else who is a threat to the LPAS program, organisation and

laws

Precautionary Reasoning in Environmental and Public Health Policy

Springer Nature This book fills a gap in the literature on the Precautionary Principle by placing the principle within the wider context of precautionary reasoning and uses philosophical arguments and case studies to demonstrate when it does—and does not—apply. The book invites the reader to take a step back from the controversy surrounding the Precautionary Principle and consider the overarching rationales for responding to threats to the environment or public health. It provides practical guidance and probing insight for the intended audience, including scholars, students, journalists, and policymakers.
