**A GUIDE FOR STATES AND SCHOOL DISTRICTS**

---

National Academies Press State education departments and school districts face an important challenge in implementing a new law that requires disadvantaged students to be held to the same standards as other students. The new requirements come from provisions of the 1994 reauthorization of Title I, the largest federal effort in precollegiate

education, which provides aid to "level the field" for disadvantaged students. Testing, Teaching, and Learning is written to help states and school districts comply with the new law, offering guidance for designing and implementing assessment and accountability systems. This book examines standards-based education reform and reviews the research on student assessment, focusing on the needs of disadvantaged students covered by Title I. With examples of states and districts that have track records in new systems, the committee develops a practical "decision framework" for education officials. The book explores how best to design assessment and accountability systems that support high levels of student learning and to work toward continuous improvement. Testing, Teaching, and Learning will be an important tool for all involved in educating disadvantaged students—state and local administrators and classroom teachers.

### **HELPING CHILDREN LEARN MATHEMATICS**

---

National Academies Press Results from national and international assessments indicate that school children in the United States are not learning mathematics well enough. Many students cannot correctly apply computational algorithms to solve problems. Their understanding and use of decimals and fractions are especially weak. Indeed, helping all children succeed in mathematics is an imperative national goal. However, for our youth to succeed, we need to change how we're teaching this discipline. Helping Children Learn Mathematics provides comprehensive and reliable information that will guide efforts to improve school mathematics from pre--kindergarten through eighth grade. The authors explain the five strands of mathematical proficiency and discuss the major changes that need to be made in mathematics instruction, instructional materials, assessments, teacher education, and the broader educational system and answers some of the frequently asked questions when it comes to mathematics instruction. The book concludes by providing recommended actions for parents and caregivers, teachers, administrators, and policy makers, stressing the importance that everyone work together to ensure a mathematically literate society.

## **THE SCIENCE AND DESIGN OF EDUCATIONAL ASSESSMENT**

---

National Academies Press Education is a hot topic. From the stage of presidential debates to tonight's dinner table, it is an issue that most Americans are deeply concerned about. While there are many strategies for improving the educational process, we need a way to find out what works and what doesn't work as well. Educational assessment seeks to determine just how well students are learning and is an integral part of our quest for improved education. The nation is pinning greater expectations on educational assessment than ever before. We look to these assessment tools when documenting whether students and institutions are truly meeting education goals. But we must stop and ask a crucial question: What kind of assessment is most effective? At a time when traditional testing is subject to increasing criticism, research suggests that new, exciting approaches to assessment may be on the horizon. Advances in the sciences of how people learn and how to measure such learning offer the hope of developing new kinds of assessments—assessments that help students succeed in school by making as clear as possible the nature of their accomplishments and the progress of their learning. *Knowing What Students Know* essentially explains how expanding knowledge in the scientific fields of human learning and educational measurement can form the foundations of an improved approach to assessment. These advances suggest ways that the targets of assessment—what students know and how well they know it—as well as the methods used to make inferences about student learning can be made more valid and instructionally useful. Principles for designing and using these new kinds of assessments are presented, and examples are used to illustrate the principles. Implications for policy, practice, and research are also explored. With the promise of a productive research-based approach to assessment of student learning, *Knowing What Students Know* will be important to education administrators, assessment designers, teachers and teacher educators, and education advocates.

## **EARLY CHILDHOOD ASSESSMENT IN SCHOOL AND CLINICAL CHILD PSYCHOLOGY**

---

Springer This book presents an integrated and coordinated framework for assessing developmental, psychological, and behavioral disorders in early childhood. Expert contributors advocate for natural-environment methods in addition to standardized measures in assessing academic and social skills as well as age-specific behavior problems in young children. Chapters model collaborations between clinicians, family, and daycare and school personnel, address diagnostic and classification issues, and conceptualize assessment as flexible, ongoing, and, as necessary, leading to coordinated services. The book gives practitioners and researchers critical tools toward establishing best practices in

an increasingly complex and important area, leading to better prevention and intervention outcomes. Included in the coverage: Standardized assessment of cognitive development. Authentic and performance-based assessment. The use of Response to Intervention (RTI) in early childhood. Collaboration in school and child care settings. Anxiety disorders, PTSD, OCD, and depression in young children. Sleeping, feeding/eating, and attachment problems in early childhood. Early Childhood Assessment in School and Clinical Child Psychology is an essential resource for clinicians and related professionals, researchers, and graduate students in child and school psychology; assessment, testing, and evaluation; occupational therapy; family studies, educational psychology; and speech pathology.
