RESEARCH TRAINING IN PSYCHIATRY RESIDENCY

STRATEGIES FOR REFORM

National Academies Press The number of psychiatric researchers does not seem to be keeping pace with the needs and opportunities that exist in brain and behavioral medicine. An Institute of Medicine committee conducted a broad review of the state of patient-oriented research training in the context of the psychiatry residency and considered the obstacles to such training and strategies for overcoming those obstacles. Careful consideration was given to the demands of clinical training. The committee concluded that barriers to research training span three categories: regulatory, institutional, and personal factors. Recommendations to address these issues are presented in the committee's report, including calling for research literacy requirements and research training curricula tailored to psychiatry residency programs of various sizes. The roles of senior investigators and departmental leadership are emphasized in the report, as is the importance of longitudinal training (e.g., from medical school through residency and fellowship). As there appears to be great interest among numerous stakeholders and a need for better tracking data, an overarching recommendation calls for the establishment of a national body to coordinate and evaluate the progress of research training in psychiatry.

COMPUTER SCIENCE AND ENGINEERING EDUCATION FOR PRE-COLLEGIATE STUDENTS AND TEACHERS

MDPI Now more than ever, as a worldwide STEM community, we need to know what pre-collegiate teachers and students explore, learn, and implement in relation to computer science and engineering education. As computer science and engineering education are not always “stand-alone” courses in pre-collegiate schools, how are pre-collegiate teachers and students learning about these topics? How can these subjects be integrated? Explore six articles in this book that directly relate to the currently hot topics of computer science and engineering education as they tie into pre-collegiate science, technology, and mathematics realms. There is a systematic review article to set the stage of the problem. Following this overview are two teacher-focused articles on professional development in computer science and entrepreneurship venture training. The final three articles focus on varying levels of student work including pre-collegiate secondary students’ exploration of engineering design technology, future science teachers’ (collegiate students) perceptions of engineering, and pre-collegiate future engineers’ exploration of environmental radioactivity. All six articles speak to computer science and engineering education in pre-collegiate forums, but blend into the collegiate world for a look at what all audiences can bring to the conversation about these topics.

TEACHING ONLINE

A GUIDE TO THEORY, RESEARCH, AND PRACTICE

JHU Press Demystifies online teaching for both enthusiastic and wary educators and helps faculty who teach online do their best work as digital instructors. It is difficult to imagine a college class today that does not include some online component—whether a simple posting of a syllabus to course management software, the use of social media for communication, or a full-blown course offering through a MOOC platform. In *Teaching Online*, Claire Howell Major describes for college faculty the changes that accompany use of such technologies and offers real-world strategies for surmounting digital teaching challenges. Teaching with these evolving media requires instructors to alter the ways in which they conceive of and do their work, according to Major. They must frequently update their knowledge of learning, teaching, and media, and they need to develop new forms of instruction, revise and reconceptualize classroom materials, and refresh their communication patterns. Faculty teaching online must also reconsider the student experience and determine what changes for students ultimately mean for their own work and for their institutions. *Teaching Online* presents instructors with a thoughtful synthesis of educational theory, research, and practice as well as a review of strategies for managing the instructional changes involved in teaching online. In addition, this book presents examples of best practices from successful online instructors as well as cutting-edge ideas from leading scholars and educational technologists. Faculty members, researchers, instructional designers, students, administrators, and policy makers who engage with online learning will find this book an invaluable resource.

Although identifying learning disabilities in a school setting is a complex process, it is particularly challenging in low- and middle-income countries that lack the appropriate resources, tools, and supports. This guide provides an introduction to learning disabilities and describes the processes and practices that are necessary for the identification process. It also describes a phased approach that countries can use to assess their current screening and evaluation services, as well as determine the steps needed to develop, strengthen, and build systems that support students with learning disabilities. This guide also provides intervention recommendations that teachers and school administrators can implement at each phase of system development. Although this guide primarily addresses learning disabilities, the practices, processes, and systems described may be also used to improve the identification of other disabilities commonly encountered in schools.
