## UNCTAD Training Manual on Statistics for FDI and the Operations of TNCs

**United Nations Publications** Many developing countries, including the least developed countries, have attracted only small amounts of foreign direct investment (FDI) despite their efforts at economic liberalisation in an increasingly globalising world. UNCTAD has prepared this three volume manual with the aim of helping developing countries to enhance the capacity of their government agencies to compile, analyse and disseminate data on FDI and the operations of transnational corporations (TNCs), based on internationally recommended standards. The volumes are: FDI Flow and Stock Data; Statistics on the Operations of Transnational Corporations; and Collecting and Reporting FDI/TNC Statistics: Institutional Issues. This Volume I stresses the importance of collecting data on FDI flows and stocks in line with international definitions and standards. It provides definitions and an overview of the existing standards set or used by international organisations and national compilers, and discusses and evaluates different approaches to compiling FDI flow and stock data, identifies data complexities and problems, and presents solutions to each of them.

## Women and the Criminal Justice System

## Failing Victims and Offenders?

**Springer** Bringing together academics and professionals, this edited collection considers key issues in current criminal justice policy and practice related specifically to women to answer the important question: are women being failed by the criminal justice system? In a landscape where women's involvement in the criminal justice system still tends to be ignored or lost in discussions about men, contributors place special emphasis on women as both victims and offenders. The chapters cover a wide range of topics relating to women and crime, including: violent and sexual victimisation, violent offending, sentencing and punishment, and rape myths. Since the peak of feminist criminal justice scholarship in the 1990s, the place of women in the criminal justice system has arguably slipped down the agenda and the authors of this collection draw on original research to make the compelling case for a swift remedy to this. Drawing on recent academic studies and professional experience to set an agenda for future research – as well as legal and policy reform – this book injects new life into the dialogue surrounding women and the criminal justice system. Innovative and timely, this collection of essays holds broad appeal to academics and practitioners, as well as students of criminology, criminal justice and law, and all those with an interest in feminism, justice, and inequality.

## Clay's Handbook of Environmental Health

**Taylor & Francis** Since its first publication in 1933, Clay's Handbook of Environmental Health (under its different names) has provided a definitive guide for the environmental health practitioner (EHP), and an essential reference for the consultant and student. This 22nd edition continues with its more recent successful structure, reviewing the core principles, techniques, competencies and skills required of an EHP, and then outlining the specialist subjects without getting bogged down in a legalistic approach, seeking to broaden the content for a more global audience. This new edition seeks to educate the EHP on the public health impacts of global heating and the climate emergency and also reflects the COVID-19 pandemic, as might be expected. Although seeking to have global appeal, the impact of the UK leaving the EU is also addressed. The book examines environmental health in different settings, including in the military, working in both conflict and natural disaster settings, and environmental health at sea and airports. In line with previous editions, case studies are used to illustrate how EH problems have been resolved. This new edition includes guidance on key issues in public and environmental health including air pollution, contaminated land, housing and health, noise, water, food safety, pests and vector control, chemicals in the environment and radiation, as well as sustainability and public health and humanitarian crises. This handbook aims to give a basic understanding of the philosophical basis of environmental health, as well as the required technical aspects and an understanding of environmental health in different settings. All chapters have sections on further reading and sources of information. Clay's Handbook is essential reading for all practitioners, students and researchers in environmental and public health wherever they are working.
