Fundamentals of Fire Protection

Jones & Bartlett Learning Up-to-date, broad-based training for fire service candidates and in-service professionals! Comprehensive coverage--from fire basics to fire department operations- and based on objectives established by the National Fire Academy. Written by experienced fire service faculty from colleges and fire departments, *Fundamentals of Fire Protection* provides a solid introduction to the full range of fire protection topics. Designed for classroom instruction or self-study, this authoritative resource is a suggested text for the model FESHE curriculum course Principles of Emergency Services (formerly Fundamentals of Fire Protection). It is ideal for students preparing to enter the field or fire protection professionals who want to advance their career. Fundamentals is the only text organized around the Principles of Emergency Services course developed by the National Fire Academy's Fire and Emergency Services Higher Education (FESHE) Conference. Comprised of faculty from over 100 institutions of higher learning with a fire science curriculum, FESHE's model curriculum sets uniform objectives for quality fire and emergency services education. Fundamentals of Fire Protection's 12 chapters are designed for a 12- or 13-week semester of study. Each chapter features measurable educational objectives based on those developed by FESHE, review questions with answer key, and student activities. Easy for instructors to use and for students to understand.

Principles of Fire Protection

Jones & Bartlett Learning This thorough introduction to fire safety basics covers everything from fire codes to construction! Written by experts, *Principles of Fire Protection* presents fire science students and new fire protection personnel with the fundamental methods of fire protection, prevention, and suppression. Twelve clear, concise chapters bring students the basics on fire hazards of materials, extinguishing agents, fire codes and standards, loss investigation and analysis, fire department organization, and much more! Each chapter includes a summary of key points and a complete reference listing. This Second Edition text is an ideal learning tool for introductory college courses, self-study, and in-service programs.

The Littorio Class

Italy's Last and Largest Battleships

Pen and Sword "An important work for anyone interested in warship design, the naval side of World War II in the Mediterranean, or modern Italian history."—New York Military Affairs Symposium For its final battleship design Italy ignored all treaty restrictions on tonnage and produced one of Europe's largest and most powerful capital ships, comparable with Germany's Bismarck class, similarly built in defiance of international agreements. The three ships of the Littorio class were typical of Italian design, being fast and elegant, but also boasting a revolutionary protective scheme—which was tested to the limits, as all three were to be heavily damaged in the hard-fought naval war in the Mediterranean; Roma had the unfortunate distinction of being the first capital ship sunk by guided missile. These important ships have never been covered in depth in English-language publications, but the need is now satisfied in this comprehensive and convincing study by two of Italy's leading naval historians. The book combines a detailed analysis of the design with an operational history, evaluating how the ships stood up to combat. It is illustrated with an amazing collection of photographs, many fine-line plans, and colored artwork of camouflage schemes, adding up to as complete a monograph on a single class ever published. Among warship enthusiasts, battleships enjoy a unique status. As the great success of Seaforth's recent book on French battleships proves, that interest transcends national boundaries, and this superbly executed study is certain to become another classic in the field. "A very impressive piece of work."—History of War "An essential book for all naval history enthusiasts."—Firetrench

Fire Protection

Systems and Response

CRC Press The modern definition of firefighter no longer means "putting the wet stuff on the red stuff." Emergency responders answer incidents ranging from fire alarm activations to elevator rescues and medical emergencies more often than full-blown fires. Consequently, responders increasingly interface with a wide array of building systems. Underscoring the changing role of firefighters, *Fire Protection: Systems and Response* presents the basic knowledge of the inner workings of fire safety/fire protection systems and related equipment in buildings. The author provides a straightforward overview of the functions and benefits of these systems and how they can assist with fire suppression, code enforcement, alarm response, and elevator rescue. The book's comprehensive discussion of elevators, fire command centers, emergency generators and lighting, and HVAC systems sets it apart from other fire protection books currently available. The topics covered prepare emergency response personnel for the challenges they face working with fire protection systems, fire alarm systems, and elevators. Logically organized, clearly written, and covering all systems in a single text, this presentation of information streamlines fire service interaction with building features and fire protection systems. Providing an understanding of how systems are designed and installed, the book is also a reference for troubleshooting fire protection problems in the field. The information not only gives responders an appreciation/knowledge of how the systems work, but helps them use this knowledge to perform their job better.
