To build an active engine mount, a commercial On-Off solenoid is modified to be used as an actuator and it is embedded inside a hydraulic engine mount. The hydraulic engine mount is modelled and tested, solenoid actuator is modelled and identified, and finally the models were integrated to obtain the analytical model of the active hydraulic mount. Then the active mount is tested and showed that the analytical model can closely predict its behaviour. In future, the developed model can be used for designing the vibration control system of this active mount. This active mount can potentially work as part of an active noise and vibration control (ANVC) system in automotive or other closely related applications as an alternative to more expensive active mount systems. B-29 Bomber Pilot's Flight Operating Manual Lulu.com The Boeing B-29 was one of the most sophisticated aircraft of WWII. It featured many innovations including guns that could be fired by remote control and pressurized crew compartments. It was also the heaviest production plane of the war with terrific range and bomb carrying capabilities. Carrying a crew of ten, the Superfortress devastated Japan in a series of gigantic raids in 1944-45. In the end it would be the B-29s "Enola Gay" and "Bock's Car" that dropped the atomic bombs and effectively ended the conflict. Originally printed by the United States Army Air Force in January of 1944, the B-29 Bomber Pilot's Flight Operating Manual taught pilots everything they needed to know about the "Superfort" Originally classified "Restricted," the manual was declassified long ago and is here reprinted in book form.
